VERSION 1

UKT-42 FULL HEIGHT TURNSTILE

The UKT-42 is a twin slimline full height turnstile. We can have our UKT-42 range delivered to site flat packed or preassembled, allowing for a rapid installation time on to a flat level base.

Our units come with a 120° three rota position configuration (4 rota 90° also available). This wider design allows users to enter carrying small items like back packs while still providing a high level of secure access.

Optional canopy heads can be fitted directly above the walkways, alongside optional access control reader mounting plates to cater for all types of third party systems.

You can use the turnstile mechanically or powered, making this product suitable for a wide range of environments. In the event of a fire alarm the units can be configured to free rotate.

Multiple finishes available, including powder coated only (for internal use), galvanized only, galvanized & powder coated, stainless steel 304 & stainless steel 316.
